

INFORCE
CABS

Affordable Arrest & Booking

Visiphor's Computerized Arrest and Booking System (CABS) provides police departments with affordable software bringing an incredible return on investment.

FEATURES & BENEFITS

Booking

Automate booking procedures to reduce administration time by 90% while eliminating error due to duplicate data entry

Photo Search

Search with photos using facial recognition technology to identify uncooperative subjects

Line Ups

Use text identifiers and/or facial recognition Photo Search to automate line up configuration in minutes

Reports

Increase visibility into cases and criminal histories with out-of-the-box reporting capabilities

Audit Logs

Store and print audit logs for court and administrative requirements; include information such as system usage, records access, and time of use

Scars, Marks & Tattoos (SMTs)

Capture images of physical features such as scars, marks and tattoos for easy identification of repeat offenders

A USER TESTIMONIAL: PAUL HOWER, LA HABRA CITY PD

California's La Habra City PD has been using CABS since 2000. La Habra's Support Service Manager, Paul Hower, provides the following CABS testimonial:

"La Habra is a city at the Northwest tip of Orange County, California. We have a population of approximately 62,000 over an area of approximately 7.3 square miles. We book approximately 3000 inmates a year."

"Prior to using CABS, we used 35mm cameras to capture our booking photos. We then had to individually complete our several necessary forms depending on the fate of the inmate, whether staying at our jail or being transported to our county jail. Since the introduction of CABS, we can take multiple photos of each arrestee as well as any and all of their tattoos or other markings. From there, they are maintained in a database that allows us to easily search and retrieve images for line ups or any other purpose."

"There are several features of CABS that make it stand out from the rest. The facial recognition, line ups (including tattoo line ups), reporting functionality, and interface capabilities are tremendous and save valuable

time. Facial recognition is a great time saver if you are dealing with an inmate who you think you have dealt with before but is either too inebriated or uncooperative to identify properly. It is also a good tool to use when running still photos through a database in an attempt to identify a suspect."

"Line ups that used to take approximately 30 minutes to put together can now be completed in approximately 2 minutes as the system automatically pulls the demographic information from your previously booked suspect. The system automatically finds similar mugshots that you can drag and drop into your line up. You can also search based upon a tattoo description and put together a tattoo line up or a suspect pool. Any element of the database can be searched alone or in combination to assist in the search for a suspect."

"A great feature of CABS is its ability to generate the many different booking related forms that may be required from the single entry which further decreases the amount of time off the street. We use several interfaces that allow us to first enter the necessary booking information into our RMS system. That information is automatically passed through to CABS where we can add additional information. From there, the record is passed on to the live scan machine.

Doing this enables us to enter information once, thereby cutting down booking time even more. By reducing the time needed to book, officers and/or jailers can afford to slow down their processes in order to ensure better accuracy while still saving time with the booking process to allow for more patrol time.”

“An additional feature of CABS is the support team that stands behind it. When we initially rolled out CABS we did so on an Access 97 platform. We have since migrated to a Microsoft SQL platform. The Visiphor support team made the migration very smooth. We have always had an extremely high level of service whenever a need has come up where we have had to consult with the Visiphor technical support team. They are worth their weight in gold. You are dealing with seasoned professionals who

know the system and are not simply relying on cards to roll through your support call. I would highly recommend the CABS software package to any department looking for a reliable booking system.”

-Paul Hower, La Habra City PD

**MEETING FUTURE NEEDS:
START SMALL, GROW BIG**

Visiphor has ensured that its CABS solution remains scalable to meet future technology needs. When the time is right, smaller agencies can upgrade their CABS system by adding Visiphor’s InForce Suite. The InForce Suite affords all of the robust user functionality of CABS while enabling user access over the Web. Not only that, but the InForce Suite also enables Web-based access to information from neighboring agencies

and jurisdictions: Search & Locate other agency data from the field or at the office to solve cases quicker.

ABOUT VISIPHOR

Visiphor provides commercial off-the-shelf (COTS) software designed to meet law enforcement needs. Our products result from over a decade of working closely with the front line law enforcement professionals who understand today’s needs better than anyone. Visiphor is compliant to numerous law enforcement industry standards while delivering significant end-user value.

Visiphor is a Microsoft Gold Certified Partner.

Left: with either text-based or mugshot searches, users can instantly access critical information to identify subjects and more efficiently fight crime.
